

## Smeralda

### **Fruit:**

Medium-large with a smooth, uniform green colour. It may be subject to bitterpit so suitable treatments are recommended. The fine, crispy, juicy, pleasant flesh is yellow with an excellent flavour, feeling fresh in the mouth because of its high sugar content and elevated acidity. The taste is similar to Granny Smith, but sweeter and more fragrant.

### **Tree:**

Compact habit with short branches and therefore very easy to manage. Precocious fruit bearing. Consistent, high productivity with no tendency to biennial bearing. Resistant to scab.

### **Ripening time:**

30 days before Granny Smith

### **Brix:**

13,5°

### **Acidity:**

8,2 g/l Malic acid
